

# Southwire™

## CONDUIT HAND BENDERS

Southwire's hand benders reliably and repeatedly perform common bends, such as stubby-ups, offset, back-to-back and saddle bends. Large serrated step provides greater control and helps prevent slippage, when applying force.

Raised and highly visible bender markings are cast on both sides of the bender head making measurements easy to read no matter how you bend.

Ductile iron (MCB1) and aluminum (MCB1/2 & MCB3/4) heads are built to provide lasting durability and extra strength.

Grooved hook prevents conduit from slipping, twisting or rolling when performing bends
